CRAFTLIFE

Project Evidence & Developer Statement

Applicant / Developer	Gusti Putra Raka Kurnia
Project	CraftLife
Repository	https://github.com/Hellowww-02/CraftLife
Development year	2026
Current release shown in repository	v1.6.0
Project status	Beta / actively developed (applicant statement)

Project Overview

CraftLife is an offline-first, Minecraft-themed desktop RPG designed to turn real-life productivity into a game-like experience. Its core concept combines habits, dailies, quests, bosses, pets, economy, health, learning, notes, and social features. The public repository describes Python + SQLite as the core and a React interface hosted in a PyQt6 WebEngine shell, with optional Supabase cloud functionality.

Developer Role

I am the creator and sole developer of CraftLife. I am responsible for the project's concept, feature planning, programming, database work, interface development, debugging, testing, documentation, and continuous improvement. I have developed the project as a personal long-term learning and software-development project.

Development Evidence from the Public Repository

Repository activity	174 commits are shown in the public repository at the time this document was prepared.
Application architecture	Python/SQLite backend and game rules, with a React UI hosted through PyQt6 WebEngine.
Current UI	The README for v1.6.0 reports 29 pages with full parity and a Craft Design System v2.
Local functionality	The repository describes habits, RPG systems, notes, health, economy, music, and learning as working offline modules.
Release	The repository currently documents CraftLife v1.6.0, including a Windows release and developer setup instructions.

Quality work	The repository documents compilation, TypeScript checks, Vite builds, UI testing, and multiple development/roadmap reports.

Technical Scope

Selected technologies and capabilities documented by the public repository

Area	Documented technology / scope
Core	Python, SQLite
Desktop framework	PyQt6 + Qt WebEngine
Frontend	React, TypeScript, Vite
Cloud / sync	Optional Supabase integration
Product focus	Productivity, habit tracking, gamification, life tracking
Offline-first	Core local modules are designed to work without internet
Release target	Windows

Project Purpose

CraftLife was created from my interest in using technology to help people develop better habits and organize everyday life in a more enjoyable way. Its central idea is to use gamification as a tool for productivity while encouraging a healthier relationship between digital activities and real-life experiences.

Selected Repository Evidence

• The public GitHub repository identifies CraftLife as an offline-first desktop RPG for real life.

• The README documents a Windows-first desktop application and a v1.6.0 release.

• The repository contains the main application source, database module, API modules, web interface, Supabase migrations, build scripts, and project documentation.

• The repository documents 29 pages in the v1.6.0 hybrid React/PyQt6 interface.

• The repository contains 174 commits at the time this document was prepared, demonstrating ongoing development activity.

Public Verification

The project source and documentation can be independently reviewed at:
https://github.com/Hellowww-02/CraftLife

Applicant Statement

I confirm that CraftLife is a personal software project that I have been developing as its creator and sole developer. The information above is intended to provide supporting evidence of my project participation and development experience for my scholarship application.
